| Contributors | ix |
| Preamble to the 2nd Edition | xi |
| Preface | xiii |

I

Introduction

1. Introduction to Ecosystem Science

Kathleen C. Weathers, David L. Strayer, and Gene E. Likens

| | |
|---|----|
| What Is an Ecosystem? | 3 |
| What Are the Properties of Ecosystems? | 9 |
| Why Do Scientists Study Ecosystems? | 12 |
| How Do Ecosystem Scientists Learn about Ecosystems? | 12 |
| From There to Here: A Short History of the Ecosystem Concept in Theory and Practice | 21 |
| References | 25 |
| Further reading | 26 |

II

Ecological Energetics

| | |
|--|----|
| Introduction | 27 |
| Units Used in Studies of Ecological Energetics | 28 |
| References | 28 |
| 2. Primary Production: The Foundation of Ecosystems | |
| Michael L. Pace, Gary M. Lovett, Cayelan C. Carey, and R. Quinn Thomas | |
| Introduction | 29 |
| Components of Primary Production | 30 |
| Measuring Primary Production | 35 |
| Primary Production Methods: Advances | 38 |

| | |
|--|----|
| Regulation of Primary Production | 39 |
| Rates and Patterns of Primary Production | 44 |
| Fates of Primary Production | 48 |
| A Tale of Scale | 49 |
| Summary | 51 |
| References | 51 |
| References for Table 2.1 | 53 |

3. Secondary Production and Consumer Energetics

David L. Strayer

| | |
|----------------------|----|
| Introduction | 55 |
| Consumer Energetics | 55 |
| Secondary Production | 60 |
| Conclusions | 75 |
| References | 77 |

4. Organic Matter Decomposition

Stuart E.G. Findlay

| | |
|---|----|
| Introduction | 81 |
| Conceptual Model of Decomposition | 84 |
| Organisms Responsible for Decomposition | 87 |
| Controls on Decomposition | 91 |
| Interactions with Other Element Cycles | 97 |
| The Future | 98 |
| Summary | 99 |
| References | 99 |

5. Microbially Mediated Redox Reactions

Stuart E.G. Findlay, Stephen K. Hamilton, David L. Strayer, and Kathleen C. Weathers

| | |
|---|-----|
| Redox Reaction Terminology | 105 |
| Energy Yield From Redox Reactions | 105 |
| Anaerobic Degradation of Organic Matter | 106 |
| Energy Yield From Inorganic Redox Reactions | 110 |

| | |
|-----------------|-----|
| Conclusions | 111 |
| References | 111 |
| Further reading | 112 |

III

Biogeochemistry

6. Element Cycling

Holly A. Ewing and Kathleen C. Weathers

| | |
|--|-----|
| What Is an Element Cycle? | 116 |
| Role of the Hydrologic Cycle | 117 |
| Chemical Properties Are Important | 118 |
| Move, Stick, and Change: A Simple Framework for Elemental Cycling | 120 |
| Beyond Boxes and Arrows | 123 |
| Interacting Elemental Cycles | 125 |
| What Kinds of Questions Are Associated with Element Cycles? | 127 |
| Summary and Thought Question | 128 |
| References | 130 |

7. The Carbon Cycle: With a Brief Introduction to Global Biogeochemistry

Jonathan J. Cole, Oleksandra Hararuk, and
Christopher T. Solomon

| | |
|---|-----|
| Why Study the Carbon Cycle? | 131 |
| Biogeochemistry of Carbon | 131 |
| The Global Carbon Cycle | 138 |
| The Carbon Cycle in Selected Ecosystems | 146 |
| Concluding Remarks | 157 |
| References | 157 |

8. The Nitrogen Cycle

Peter M. Groffman, Emma J. Rosi, and
Robinson W. Fulweiler

| | |
|--|-----|
| Introduction | 161 |
| The Global Picture | 162 |
| Nitrogen Cycle Processes | 165 |
| Nitrogen Cycling in Terrestrial Ecosystems | 174 |
| Nitrogen Cycling in Aquatic Ecosystems | 177 |
| Nitrogen Balances: The Enigma of Missing Nitrogen | 184 |
| References | 186 |

9. The Phosphorus Cycle

Meagan E. Schipanski and Elena M. Bennett

| | |
|--|-----|
| Introduction | 189 |
| Background | 190 |
| The Importance of Phosphorus in Terrestrial Ecosystems | 190 |
| The Importance of Phosphorus in Agricultural Ecosystems | 191 |
| The Importance of Phosphorus in Aquatic Ecosystems | 191 |
| The Global Phosphorus Cycle | 193 |
| The Phosphorus Cycle at the Regional Scale | 196 |
| The Phosphorus Cycle at the Local Scale | 199 |
| Human Alteration of the Global Phosphorus Cycle | 204 |
| Managing Human Interaction with the Phosphorus Cycle | 210 |
| Summary | 211 |
| References | 212 |

IV

Synthesis

10. Revisiting the Ecosystem Concept: Important Features That Promote Generality and Understanding

Michael L. Pace

| | |
|-------------------------------|-----|
| Introduction | 217 |
| Budgets and Boundaries | 218 |
| Inclusiveness and Flexibility | 222 |
| Generality and Prediction | 224 |
| References | 226 |

11. Ecosystems in a Heterogeneous World

Steward T.A. Pickett and Mary L. Cadenasso

| | |
|--|-----|
| Introduction | 227 |
| The Nature of Heterogeneity | 228 |
| Toward A Framework for Space and Time Heterogeneity | 236 |
| Internal and External Heterogeneity | 240 |
| First Principles for Assessing Heterogeneity | 243 |
| Conclusions: Ecosystems in Time and Space | 244 |
| References | 246 |

12. Controls on Ecosystem Structure and Function

Kathleen C. Weathers, Holly A. Ewing, Clive G. Jones, and David L. Strayer

What Do We Mean by "Control"? 249
 Why Do We Care about Controls on Ecosystems? 250
 How Are Ecosystems Controlled? 250
 Complications 262
 References 263

V

Case Studies

13. Streams and Their Valleys

Judy L. Meyer

14. Ecology of Lyme Disease

Richard S. Ostfeld

15. Understanding Ecosystem Effects of Dams

Emily H. Stanley

16. Acid Rain

Gene E. Likens

17. The Oligotrophication of Narragansett Bay

Robinson W. Fulweiler

18. From Global Environmental Change to Sustainability Science: Ecosystem Studies in the Yaqui Valley, Mexico

Pamela A. Matson

VI

Frontiers

19. Ecosystem Science: The Continuing Evolution of Our Discipline

David L. Strayer, Steward T.A. Pickett, Kathleen C. Weathers, and Gene E. Likens

Introduction 323
 Example 1: The Driving Power of Technological Advances 324
 Example 2: The Challenges of Understanding and Managing Human Effects on Ecosystem Services 325
 Example 3: Ecosystem Science and Changes in Society 328
 Example 4: Reconceptualizing Ecosystems 330
 Closing Remarks 332
 References 332

Glossary 335

Index 339

For those choosing to use the book in a classroom environment, or who want to enrich further their reading experience, teaching and learning assets are available at <https://www.elsevier.com/books-and-journals/book-companion/9780128127629>
