

Contents

1	Introduction	1
1.1	Limit Cycles	1
1.2	Bifurcation Theory	3
1.2.1	Hopf Bifurcation	4
1.3	Strange Attractors	5
1.4	Turbulence	7
1.5	Stochasticity	8
1.6	The Lorenz Equations	10
1.7	Notes and References	13
1.7.1	Poincaré and the Swedish Prize	14
1.7.2	Weather Predictability	15
1.8	Exercises	16
2	One-Dimensional Maps	21
2.1	Chaos in Maps	21
2.2	Bifurcations in Maps	25
2.3	Period-Doubling and the Feigenbaum Conjectures	28
2.3.1	Bifurcation Trees	33
2.4	Symbolic Dynamics: The Kneading Sequence	38
2.5	Notes and References	42
2.5.1	The Feigenbaum Conjectures	42
2.5.2	Kneading Theory	43
2.5.3	Period-Doubling in Experiments	43
2.6	Exercises	43
3	Hopf Bifurcations	49
3.1	Hopf Bifurcation Theorem	49
3.1.1	Implicit Function Theorem	51
3.1.2	Proof of Hopf Bifurcation Theorem	55
3.1.3	Stability	59

3.2	Normal Forms	59
3.3	Centre Manifold Theorem	63
3.3.1	Formal Power Series Expansion	69
3.3.2	Application to Hopf Bifurcation	72
3.4	Secondary Hopf Bifurcations	74
3.4.1	Stability of Periodic Orbits	74
3.4.2	Floquet Theory	75
3.4.3	Normal Forms	77
3.4.4	Weak and Strong Resonance	80
3.4.5	Circle Maps, Arnold Tongues, Frequency Locking	81
3.4.6	Structural Stability	89
3.5	Tertiary Hopf Bifurcation	89
3.6	Notes and References	90
3.6.1	Many Theorems	90
3.6.2	Multiple Scale Methods	90
3.6.3	Circle Maps	91
3.6.4	Tertiary Hopf Bifurcation	92
3.7	Exercises	92
4	Homoclinic Bifurcations	99
4.1	Lorenz Equations	101
4.1.1	Homoclinic Bifurcations	103
4.1.2	One-Dimensional Map	107
4.2	Symbolic Dynamics	109
4.2.1	The Smale Horseshoe	111
4.2.2	Strange Attractors	111
4.3	Shilnikov Bifurcations	113
4.3.1	Approximation and Proof	119
4.4	Matched Asymptotic Expansions for n -dimensional Flows	122
4.4.1	Strange Attractors	128
4.4.2	Partial Differential Equations	129
4.4.3	Transition to Turbulence	130
4.5	Notes and References	130
4.5.1	The Lorenz Equations	130
4.5.2	Shilnikov Bifurcations	131
4.5.3	Infinite Dimensions	131
4.5.4	Turbulence and Chaos	133
4.6	Exercises	133
5	Hamiltonian Systems	143
5.1	Lagrangian Mechanics	144
5.1.1	Hamilton's Principle	146
5.1.2	Hamilton's Equations	147

5.2	Hamiltonian Mechanics	148
5.2.1	Integrability	149
5.2.2	Action-Angle Variables	152
5.2.3	Integral Invariants	153
5.2.4	Canonical Transformations	154
5.2.5	The Hamilton–Jacobi Equation	155
5.2.6	Quasi-Periodic Motion	157
5.3	Perturbation Theory	157
5.3.1	Other Applications	158
5.3.2	Resonance and Small Divisors	160
5.3.3	The KAM Theorem	163
5.3.4	Superconvergence	166
5.4	Resonance and Stochasticity	169
5.4.1	Area-Preserving Maps	169
5.4.2	Poincaré–Birkhoff Fixed Point Theorem	172
5.4.3	Removal of Resonances	173
5.4.4	Secondary Resonance	176
5.4.5	Melnikov’s Method	178
5.4.6	Heteroclinic Tangles	180
5.4.7	Arnold Diffusion	181
5.5	Examples	182
5.5.1	A Restricted Three-Body Problem	182
5.5.2	Lagrange Points	191
5.5.3	The Hénon–Heiles System	193
5.5.4	Hénon’s Area-Preserving Map	195
5.5.5	Standard Map	196
5.6	Notes and References	198
5.6.1	The KAM Theorem	198
5.6.2	Restricted Three-Body Problem	199
5.6.3	Hénon–Heiles Potential	199
5.6.4	Hénon Area-Preserving Map	200
5.6.5	The Last KAM Torus	200
5.7	Exercises	200
6	Diverse Applications	207
6.1	Chaotic Data	207
6.1.1	Weather Forecasting	209
6.1.2	The Stock Market	209
6.1.3	Landslide Statistics	210
6.1.4	Chaos and Noise	210

6.2	Statistical Methods	211
6.2.1	Stochastic Processes	212
6.2.2	Autocorrelation and Power Spectral Density	214
6.2.3	Autoregressive Models	218
6.3	Phase Space Embedding	219
6.3.1	Singular Systems Analysis	220
6.3.2	Time Lag Selection	223
6.3.3	Nonlinear Filtering	226
6.3.4	Prediction	228
6.4	Dimensions and Lyapunov Exponents	229
6.4.1	The Kaplan–Yorke Conjecture	232
6.5	Fractals	235
6.5.1	The Cantor Middle-Thirds Set	235
6.5.2	Iterated Function Systems	236
6.5.3	Julia Sets	237
6.5.4	The Mandelbrot Set	240
6.6	Whither Turbulence?	242
6.6.1	Linear Stability	243
6.6.2	Nonlinear Stability	244
6.6.3	Experimental Observations in Shear Flows	245
6.6.4	A Homoclinic Connection?	246
6.6.5	Practical Turbulence	247
6.7	Notes and References	248
6.7.1	Time Series	248
6.7.2	Phase Space Embedding	249
6.7.3	Dimensions and Fractals	250
6.7.4	Turbulence	255
6.8	Exercises	257
	Appendix: Numerical Notes for Figures	271
	References	293
	Index	299
