Contents

1 **FUNDAMENTALS** 1
1.1 Topological Spaces 1
1.1.1 Definitions and Examples 1
1.1.2 Topological Interior and Closure of Sets 5
1.1.3 Continuity of Mappings 7
1.1.4 Bases for Topologies 9
1.1.5 Topologies Generated by Families of Mappings 10
1.1.6 Product Topology and Quotient Topology 12
1.1.7 Subspace Topology 13
1.1.8 Separation Axioms 15
1.1.9 Compactness 18
1.1.10 Connectedness and Disconnectedness 25
1.1.11 Net Convergence in Topological Spaces 28
1.2 Topological Vector Spaces 32
1.2.1 Basic Concepts in Topological Vector Spaces 32
1.2.2 Weak Topology and Weak* Topology 39
1.2.3 Quotient Spaces 46
1.3 Some Fundamental Theorems of Functional Analysis 49
1.3.1 Hahn-Banach Extension Theorem 50
1.3.2 Baire Category Theorem 54
1.3.3 Open Mapping Theorem 56
1.3.4 Closed Graph Theorem and Uniform Boundedness Principle 58
1.4 Exercises for Chapter 1 60
1.5 Commentaries to Chapter 1 63

2 **BASIC THEORY OF CONVEXITY** 65
2.1 Convexity of Sets 65
2.1.1 Basic Definitions and Elementary Properties 65
2.1.2 Operations on Convex Sets and Convex Hulls 69

2.2 Cores, Minkowski Functions, and Seminorms 74
2.2.1 Algebraic Interior and Linear Closure 74
2.2.2 Minkowski Gauges 78
2.2.3 Seminorms and Locally Convex Topologies 80
2.3 Convex Separation Theorems 85
2.3.1 Convex Separation in Vector Spaces 85
2.3.2 Convex Separation in Topological Vector Spaces 95
2.3.3 Convex Separation in Finite Dimensions 102
2.3.4 Extreme Points of Convex Sets 114
2.4 Convexity of Functions 118
2.4.1 Descriptions and Properties of Convex Functions 118
2.4.2 Convexity under Differentiability 124
2.4.3 Operations Preserving Convexity of Functions 128
2.4.4 Continuity of Convex Functions 136
2.4.5 Lower Semicontinuity and Convexity 142
2.5 Extended Relative Interiors in Infinite Dimensions 147
2.5.1 Intrinsic Relative and Quasi-Relative Interiors 147
2.5.2 Convex Separation via Extended Relative Interiors 158
2.5.3 Extended Relative Interiors of Graphs and Epigraphs 163
2.6 Exercises for Chapter 2 169
2.7 Commentaries to Chapter 2 173

3 CONVEX GENERALIZED DIFFERENTIATION 179
3.1 The Normal Cone and Set Extremality 179
3.1.1 Basic Definition and Normal Cone Properties 180
3.1.2 Set Extremality and Convex Extremal Principle 182
3.1.3 Normal Cone Intersection Rule in Topological Vector Spaces 185
3.1.4 Normal Cone Intersection Rule in Finite Dimensions 190
3.2 Coderivatives of Convex-Graph Mappings 194
3.2.1 Coderivative Definition and Elementary Properties 195
3.2.2 Coderivative Calculus in Topological Vector Spaces 196
3.2.3 Coderivative Calculus in Finite Dimensions 200
3.3 Subgradients of Convex Functions 201
3.3.1 Basic Definitions and Examples 201
3.3.2 Subdifferential Sum Rules 212
3.3.3 Subdifferential Chain Rules 216
3.3.4 Subdifferentiation of Maximum Functions 219
3.3.5 Distance Functions and Their Subgradients 222

3.4 Generalized Differentiation under Polyhedrality 232
3.4.1 Polyhedral Convex Separation 232
3.4.2 Polyhedral Normal Cone Intersection Rule 239
3.4.3 Polyhedral Calculus for Coderivatives and Subdifferentials 241
3.5 Exercises for Chapter 3 245
3.6 Commentaries to Chapter 3 249

4 ENHANCED CALCULUS AND FENCHEL DUALITY 255
4.1 Fenchel Conjugates 255
4.1.1 Definitions, Examples, and Basic Properties 255
4.1.2 Support Functions 263
4.1.3 Conjugate Calculus 267
4.2 Enhanced Calculus in Banach Spaces 273
4.2.1 Support Functions of Set Intersections 273
4.2.2 Refined Calculus Rules 275
4.3 Directional Derivatives 278
4.3.1 Definitions and Elementary Properties 279
4.3.2 Relationships with Subgradients 280
4.4 Subgradients of Supremum Functions 283
4.4.1 Supremum of Convex Functions 283
4.4.2 Subdifferential Formula for Supremum Functions 285
4.5 Subgradients and Conjugates of Marginal Functions 286
4.5.1 Computing Subgradients and Another Chain Rule . . . 287
4.5.2 Conjugate Calculations for Marginal Functions 290
4.6 Fenchel Duality 292
4.6.1 Fenchel Duality for Convex Composite Problems 292
4.6.2 Duality Theorems via Generalized Relative Interiors 298
4.7 Exercises for Chapter 4 302
4.8 Commentaries to Chapter 4 304

5 VARIATIONAL TECHNIQUES AND FURTHER SUBGRADIENT STUDY 311
5.1 Variational Principles and Convex Geometry 311
5.1.1 Ekeland's Variational Principle and Related Results 312
5.1.2 Convex Extremal Principles in Banach Spaces 315
5.1.3 Density of ε-Subgradients and Some Consequences 318
5.2 Calculus Rules for ε-Subgradients 322
5.2.1 Exact Sum and Chain Rules for ε-Subgradients 322
5.2.2 Asymptotic ε-Subdifferential Calculus 325
5.3 Mean Value Theorems for Convex Functions 328

5.3.1 Mean Value Theorem for Continuous Functions 328
5.3.2 Approximate Mean Value Theorem 330
5.4 Maximal Monotonicity of Subgradient Mappings 335
5.5 Subdifferential Characterizations of Differentiability 338
5.5.1 Gâteaux and Fréchet Differentiability 338
5.5.2 Characterizations of Gâteaux Differentiability 346
5.5.3 Characterizations of Fréchet Differentiability 350
5.6 Generic Differentiability of Convex Functions 353
5.6.1 Generic Gâteaux Differentiability 354
5.6.2 Generic Fréchet Differentiability 356
5.7 Spectral and Singular Functions in Convex Analysis 359
5.7.1 Von Neumann Trace Inequality 359
5.7.2 Spectral and Symmetric Functions 362
5.7.3 Singular Functions and Their Subgradients 366
5.8 Exercises for Chapter 5 371
5.9 Commentaries to Chapter 5 375

6 MISCELLANEOUS TOPICS ON CONVEXITY 381
6.1 Strong Convexity and Strong Smoothness 381
6.1.1 Basic Definitions and Relationships 381
6.1.2 Strong Convexity/Strong Smoothness via Derivatives 385
6.2 Derivatives of Conjugates and Nesterov's Smoothing 391
6.2.1 Differentiability of Conjugate Compositions 391
6.2.2 Nesterov's Smoothing Techniques 393
6.3 Convex Sets and Functions at Infinity 398
6.3.1 Horizon Cones and Unboundedness 398
6.3.2 Perspective and Horizon Functions 400
6.4 Signed Distance Functions 404
6.4.1 Basic Definition and Elementary Properties 405
6.4.2 Lipschitz Continuity and Convexity 407
6.5 Minimal Time Functions 410
6.5.1 Minimal Time Functions with Constant Dynamics . . . 410
6.5.2 Subgradients of Minimal Time Functions 416
6.5.3 Signed Minimal Time Functions 420
6.6 Convex Geometry in Finite Dimensions 424
6.6.1 Carathéodory Theorem on Convex Hulls 425
6.6.2 Geometric Version of Farkas Lemma 427
6.6.3 Radon and Helly Theorems on Set Intersections 430
6.7 Approximations of Sets and Geometric Duality 432
6.7.1 Full Duality between Tangent and Normal Cones . . . 432
6.7.2 Tangents and Normals for Polyhedral Sets 434
6.8 Exercises for Chapter 6 435
6.9 Commentaries to Chapter 6 441

7 **CONVEXIFIED LIPSCHITZIAN ANALYSIS** 445
7.1 Generalized Directional Derivatives 446
7.1.1 Definitions and Relationships 446
7.1.2 Properties of Extended Directional Derivatives 452
7.2 Generalized Derivative and Subderivative Calculus 455
7.2.1 Calculus Rules for Subderivatives 456
7.2.2 Calculus of Generalized Directional Derivatives 461
7.3 Directionally Generated Subdifferentials 465
7.3.1 Basic Definitions and Some Properties 465
7.3.2 Calculus Rules for Generalized Gradients 470
7.3.3 Calculus of Contingent Subgradients 477
7.4 Mean Value Theorems and More Calculus 480
7.4.1 Mean Value Theorems for Lipschitzian Functions . . . 480
7.4.2 Additional Calculus Rules for Generalized Gradients 483
7.5 Strict Differentiability and Generalized Gradients 486
7.5.1 Notions of Strict Differentiability 487
7.5.2 Single-Valuedness of Generalized Gradients 490
7.6 Generalized Gradients in Finite Dimensions 493
7.6.1 Rademacher Differentiability Theorem 494
7.6.2 Gradient Representation of Generalized Gradients . . . 495
7.6.3 Generalized Gradients of Antiderivatives 497
7.7 Subgradient Analysis of Distance Functions 500
7.7.1 Regular and Limiting Subgradients of Lipschitzian Functions 500
7.7.2 Regular and Limiting Subgradients of Distance Functions 505
7.7.3 Subgradients of Convex Signed Distance Functions 510
7.8 Differences of Convex Functions 514
7.8.1 Continuous DC Functions 515
7.8.2 The Mixing Property of DC Functions 518
7.8.3 Locally DC Functions 525
7.8.4 Subgradients and Conjugates of DC Functions 532
7.9 Exercises for Chapter 7 536
7.10 Commentaries to Chapter 7 543
