

Contents

1	Introduction	1
1.1	Basic definitions	1
1.1.1	Semilattices, lattices and Boolean algebras.	3
1.1.2	Basic remarks on universal algebra	6
1.1.3	Commutative and associative logics	8
1.2	General finite embeddability theorem	11
2	MV-algebras	19
2.1	Extensions of Di Nola's Theorem	21
2.1.1	Farkas' lemma	22
2.1.2	The Embedding lemma	23
2.1.3	An elementary proof of the completeness of the Łukasiewicz axioms	27
2.1.4	Extensions of Di Nola's Theorem	28
2.1.5	Representation of MV-algebras by regular ultrapowers	31
2.2	Tense MV-algebras	35
2.2.1	Dyadic numbers and MV-terms	38
2.2.2	Filters, ultrafilters and the term t_r	40
2.2.3	Semi-states on MV-algebras	43
2.2.4	Functions between MV-algebras and their construction	49
2.2.5	The main theorem and its applications	54

3	Lattice effect algebras	63
3.1	Introduction and preliminaries	63
3.2	Finitely generated varieties	73
3.2.1	Finitely generated subvarieties: Axiomatization	73
3.2.2	Free algebras in finitely generated subvarieties	83
3.3	S-tense operators on lattice effect algebras	86
3.3.1	S-tense operators on lattice effect algebras	88
3.3.2	E-semi-states on lattice effect algebras	93
3.3.3	Functions between lattice effect algebras and their construction	98
3.3.4	The representation theorem and its applications	102
4	Non-associative logics	109
4.1	Commutative basic algebras	110
4.1.1	Commutative basic algebras	111
4.1.2	Ideals in commutative basic algebras	113
4.2	Examples of commutative basic algebras	118
4.3	States on commutative basic algebras	128
4.3.1	States	129
4.3.2	State-morphisms	133
4.3.3	State space	135
4.3.4	De Finetti's coherent maps and Borel states	139
4.4	Non-associative <i>BL</i> -algebras	142
4.4.1	Non-associative residuated lattices	142
4.4.2	Congruences and filters	145
4.4.3	Representable non-associative residuated lattices	148
4.4.4	The main theorem	153
5	State morphisms on algebras	159
5.1	Subdirectly Irreducible State <i>BL</i> -algebras	161
5.2	General State-Morphism Algebras	167
5.3	Varieties of State-Morphism Algebras	173
5.4	Applications to Special Types of Algebras	177
