

# Contents

<b>1</b>	<b>Introduction to Recurrence Relations</b> .....	1
1.1	Recursive Sequences of Order $k$ .....	2
1.2	Recurrent Sequences Defined by a Sequence of Functions .....	3
1.3	Systems of Recurrent Sequences .....	3
1.4	Existence and Uniqueness of the Solution .....	4
1.5	Recurrent Sequences Arising in Practical Problems .....	6
1.5.1	Applications in Mathematical Modeling .....	6
1.5.2	Algebra .....	8
1.5.3	Combinatorics .....	9
1.5.4	Geometry .....	11
1.5.5	Analysis .....	12
1.5.6	Iterative Numerical Methods .....	14
<b>2</b>	<b>Basic Recurrent Sequences</b> .....	19
2.1	First-Order Linear Recurrent Sequences .....	19
2.2	Second-Order Linear Recurrent Sequences .....	26
2.2.1	Homogeneous Recurrent Sequences .....	26
2.2.2	Nonhomogeneous Recurrent Sequences .....	34
2.2.3	Fibonacci, Lucas, Pell, and Pell–Lucas Numbers .....	38
2.2.4	The Polynomials $U_n(x, y)$ and $V_n(x, y)$ .....	48
2.2.5	Properties of Fibonacci, Lucas, Pell, and Lucas–Pell Numbers .....	58
2.2.6	Zeckendorf’s Theorem .....	65
2.3	Homographic Recurrences .....	67
2.3.1	Key Definitions .....	67
2.3.2	Homographic Recurrent Sequences .....	68
2.3.3	Representation Theorems for Homographic Sequences .....	72
2.3.4	Convergence and Periodicity .....	74
2.3.5	Homographic Recurrences with Variable Coefficients .....	77

<b>3 Arithmetic and Trigonometric Properties of Some Classical Recurrent Sequences</b> .....	85
3.1 Arithmetic Properties of Fibonacci and Lucas Sequences.....	85
3.2 Arithmetic Properties of Pell and Pell–Lucas Numbers .....	90
3.3 Trigonometric Expressions for the Fibonacci, Lucas, Pell, and Pell–Lucas Numbers .....	94
3.4 Identities Involving the Resultant of Polynomials .....	97
<b>4 Generating Functions</b> .....	105
4.1 Ordinary Generating Functions .....	105
4.1.1 Basic Operations and Examples .....	105
4.1.2 Generating Functions of Classical Polynomials .....	113
4.1.3 Generating Functions of Classical Sequences.....	115
4.1.4 The Explicit Formula for the Fibonacci, Lucas, Pell, and Pell–Lucas Polynomials .....	116
4.1.5 From Generating Functions to Properties of the Sequence .....	118
4.2 Exponential Generating Functions.....	119
4.2.1 Basic Operations and Examples .....	120
4.2.2 Generating Functions for Polynomials $U_n$ and $V_n$ .....	124
4.2.3 Generating Functions of Classical Polynomials .....	125
4.2.4 Generating Functions of Classical Sequences.....	127
4.3 The Cauchy Integral Formula.....	127
4.3.1 A Useful Version of the Cauchy Integral Formula.....	128
4.3.2 The Integral Representation of Classical Sequences.....	130
<b>5 More on Second-Order Linear Recurrent Sequences</b> .....	135
5.1 Preliminary results.....	135
5.1.1 General Sequence Term .....	136
5.1.2 Ratios of Horadam Sequences .....	137
5.1.3 Particular Horadam Orbits .....	138
5.2 Periodicity of Complex Horadam Sequences .....	140
5.2.1 Geometric Progressions of Complex Argument .....	141
5.2.2 Nondegenerate Case.....	143
5.2.3 Degenerate Case .....	145
5.3 The Geometry of Periodic Horadam Orbits .....	147
5.3.1 Regular Star Polygons.....	148
5.3.2 Bipartite Graphs .....	148
5.3.3 Multipartite Graphs.....	150
5.3.4 Geometric Bounds of Periodic Orbits .....	153
5.3.5 “Masked” Periodicity.....	154
5.4 The Enumeration of Periodic Horadam Patterns.....	157
5.4.1 The Number of Horadam Patterns of Fixed Length .....	158
5.4.2 A First Formula.....	159
5.4.3 A Second Formula.....	162

5.4.4	Computational Complexity .....	164
5.4.5	Asymptotic Bounds .....	165
5.5	Non-periodic Horadam Orbits .....	166
5.5.1	Degenerate Orbits .....	167
5.6	An Atlas of Horadam Patterns .....	168
5.6.1	Stable Orbits: $r_1 = r_2 = 1$ .....	168
5.6.2	Quasi-Convergent Orbits for $0 \leq r_1 < r_2 = 1$ .....	173
5.6.3	Convergent Orbits for $0 \leq r_1 \leq r_2 < 1$ .....	175
5.6.4	Divergent Orbits for $1 < r_2$ .....	182
5.7	A Horadam-Based Pseudo-Random Number Generator .....	187
5.7.1	Pseudo-Random Generators and Horadam Sequences .....	187
5.7.2	Complex Arguments of 2D Dense Horadam Orbits .....	188
5.7.3	Monte Carlo Simulations for Mixed Arguments .....	190
5.8	Nonhomogeneous Horadam Sequences .....	192
5.8.1	Constant Perturbation .....	192
5.8.2	Periodic Perturbations .....	193
<b>6</b>	<b>Higher Order Linear Recurrent Sequences</b> .....	<b>195</b>
6.1	Linear Recurrent Sequences (LRS) .....	196
6.1.1	Definition and General Term .....	196
6.1.2	The Solution of a Linear Recurrence Equation .....	197
6.1.3	The Space of Solutions for Linear Recurrence Equations ...	201
6.1.4	Reduction of Order for LRS .....	202
6.2	Systems of Recurrent Sequences .....	205
6.2.1	Weighted Arithmetic Mean .....	206
6.2.2	The Solution of a System of Linear Recurrence Relations .....	207
6.2.3	Systems of Two Linear Recurrent Sequences .....	211
6.2.4	Sequences Interpolating Geometric Inequalities .....	221
6.3	The Periodicity of Complex LRS .....	226
6.3.1	Distinct Roots .....	226
6.3.2	Equal Roots .....	230
6.3.3	Distinct Roots with Arbitrary Multiplicities .....	234
6.4	The Geometry and Enumeration of Periodic Patterns .....	237
6.4.1	Geometric Bounds of Periodic Orbits .....	237
6.4.2	The Geometric Structure of Periodic Orbits .....	239
6.4.3	“Masked” Periodicity .....	240
6.4.4	The Enumeration of Periodic Orbits .....	243
6.4.5	A First Formula for $H_p(m; k)$ .....	243
6.5	Orbits Generated by Roots of Unity .....	247
6.6	Orbits of Complex General Order LRS .....	250
6.6.1	Stable Orbits: $r_1 = r_2 = \dots = r_m = 1$ .....	250
6.6.2	Quasi-Convergent Orbits: $0 < r_1 < r_2 = r_3 = 1$ .....	253
6.6.3	Convergent Orbits: $0 \leq r_1 \leq r_2 \leq \dots \leq r_m < 1$ .....	256
6.6.4	Divergent Orbits: $r_m > 1$ .....	257

6.7	Connection to Finite Differences .....	259
6.7.1	Solving Difference Equations .....	260
6.7.2	Finding the Difference Equation for a Sequence .....	261
<b>7</b>	<b>Recurrences in Olympiad Training</b> .....	<b>263</b>
7.1	First-Order Recurrent Sequences .....	263
7.2	Second-Order Recurrent Sequences .....	266
7.3	Classical Recurrent Sequences .....	269
7.4	Higher Order Recurrence Relations .....	272
7.5	Systems of Recurrence Relations .....	273
7.6	Homographic Recurrent Sequences .....	275
7.7	Complex Recurrent Sequences .....	276
7.8	Recurrent Sequences in Combinatorics .....	278
7.9	Miscellaneous .....	280
<b>8</b>	<b>Solutions to Proposed Problems</b> .....	<b>283</b>
8.1	First-Order Recurrent Sequences .....	283
8.2	Second-Order Recurrent Sequences .....	296
8.3	Classical Recurrent Sequences .....	313
8.4	Higher Order Recurrent Sequences .....	330
8.5	Systems of Recurrence Relations .....	338
8.6	Homographic Recurrent Sequences .....	350
8.7	Complex Recurrent Sequences .....	357
8.8	Recurrent Sequences in Combinatorics .....	364
8.9	Miscellaneous .....	374
	<b>Appendix</b> .....	<b>381</b>
<b>A</b>	<b>Complex Geometry and Number Theory</b> .....	<b>381</b>
A.1	Complex Geometry .....	381
A.1.1	The Triangle Inequality .....	381
A.1.2	Regular Star Polygons and Multipartite Graphs .....	382
A.2	Key Elements of Number Theory .....	382
A.2.1	The <i>lcm</i> and <i>gcd</i> of Integer Pairs .....	382
A.2.2	The <i>lcm</i> and <i>gcd</i> of Integer Tuples .....	383
A.2.3	Links Between the <i>lcm</i> and <i>gcd</i> of Integer Tuples .....	384
A.2.4	Euler's Totient Function .....	385
A.2.5	The "Stars and Bars" Argument .....	385
A.2.6	Partitions of Numbers and Stirling Numbers .....	386
A.2.7	Linear (In)dependence and Density Results .....	387
A.3	Numerical Implementation of LRS General Terms .....	390
A.3.1	Distinct Roots .....	391
A.3.2	Equal Roots .....	391
A.3.3	Distinct Roots $z_1, \dots, z_m$ of Higher Multiplicities $d_1, \dots, d_m$ .....	392
	<b>References</b> .....	<b>393</b>
	<b>Index</b> .....	<b>401</b>
