

Contents

1	Introduction	1
1.1	Analysis of Uranium Resources	1
1.2	Research on Sandstone-Type Uranium Deposits in Ordos Basin	2
1.3	Breakthroughs and Main Achievements Related to Sandstone-Type Uranium Resources	4
2	Background of the Ordos Basin	7
2.1	Regional Geological Background	7
2.1.1	Regional Stratigraphy	9
2.1.2	Regional Structure	29
2.1.3	Magmatic Activity and Metamorphism	37
2.1.4	Tectonic–Sedimentary Evolution of the Ordos Basin	41
2.1.5	Tectono–Thermal History of the Basin Since the Jurassic	45
2.2	Characteristics of the Regional Geophysical Field	48
2.2.1	Physical Properties of Rock Strata	48
2.2.2	Characteristics of the Regional Gravitational Field	58
2.2.3	Characteristics of the Regional Magnetic Field	58
2.2.4	Radiological Anomalies	64
2.2.5	Comprehensive Interpretation of Regional Geophysical Fields	67
2.3	Geology Inferred from Remote Sensing	69
2.3.1	Overall Image Characteristics of the Ordos Basin and Its Periphery	69
2.3.2	Main Linear Structural Features	70
2.3.3	Remotely Sensed Geological Characteristics of Typical Deposits	81
2.4	Geochemical Characteristics of the Basin Periphery	85
2.4.1	Regional Distribution of Elements	86

2.4.2	Spatial Variation Characteristics of Elements and Compounds	88
2.4.3	Association of Elements	89
2.4.4	Enrichment and Depletion Characteristics of the Basement and Caprock in the Basin	94
2.4.5	Elemental Distribution Characteristics of the Main Rock Masses Around the Basin	94
2.4.6	Geochemical Background of Uranium Mineralization Along the Periphery of the Basin	95
2.4.7	Delineation of Uranium Source Rocks Along the Periphery of the Basin	100
2.5	Hydrogeological Characteristics of the Basin	102
2.5.1	Hydrogeological Units	102
2.5.2	Types and Distribution of Groundwater	103
2.5.3	Groundwater Replenishment, Diameter, and Discharge Conditions	106
2.5.4	Hydrochemical Characteristics of Groundwater	108
2.5.5	Characteristics of the Fissure Pore Aquifer in Clastic Rock of the Zhiluo Formation in the Middle Jurassic	110
2.6	Internal Structural Units of the Basin	111
2.6.1	Western Margin Thrust Belt	113
2.6.2	Northern Uplift Zone	115
2.6.3	Yulin Uplift Zone	116
2.6.4	Central Uplift Zone	116
2.6.5	Southeastern Uplift Zone	116
2.6.6	Central Subsidence Zone	117
2.7	Summary	117
	References	119
3	Geological Characteristics of Uranium-Bearing Rock Series in Key Metallogenic Prospects	121
3.1	Classification of Uranium-Bearing Rock Series	121
3.2	Geological Characteristics and Correlation of Uranium-Bearing Rock Series in Key Metallogenic Prospective Areas	122
3.2.1	Northeastern Margin of the Ordos Basin	122
3.2.2	Southeastern Margin of the Ordos Basin	145
3.2.3	Western Margin of the Ordos Basin	149
3.2.4	Southwestern Margin of the Ordos Basin	159
3.2.5	Central Part of the Ordos Basin	166
3.3	Comparison of Logging Parameters of Uranium-Bearing Rock Series in Key Metallogenic Prospective Areas	170
3.3.1	Logging Response of the Zhiluo Formation	178
3.3.2	Logging Identification of Different Lithologies in the Zhiluo Formation	182

3.4	Sedimentary Environment of Uranium-Bearing Rock Series in the Ordos Basin	184
3.4.1	Restriction of Color Zoning of Uranium-Bearing Rock Series on the Paleo-sedimentary Environment	184
3.4.2	Indicative Significance of Biological Fossils to the Paleoclimate of Uranium-Bearing Rock Series	210
3.4.3	Geochemical Characteristics and Provenance Indication Significance of the Zhiluo Formation of Uranium-Bearing Rock Series in the Ordos Basin	218
3.5	Summary	238
	References	240
4	Geological Characteristics of Typical Deposits and Newly Discovered Ore-Producing Areas	245
4.1	Geological Characteristics of the Uranium Concentration Area Along the Northeastern Margin	247
4.1.1	Tarangaole Mining Area	247
4.1.2	Zaohuohao Uranium Deposit	258
4.1.3	Nalinggou Uranium Deposit	262
4.1.4	Daying Uranium Deposit	265
4.1.5	Wulanxili Mining Area	271
4.2	Geological Characteristics of Uranium Ore Concentration Areas Along the Western Margin	275
4.2.1	Yangchangwan Mining Area	275
4.2.2	Shicaocun Mining Area	283
4.2.3	Ciyaobao Uranium Deposit	289
4.3	Geological Features of the Uranium Concentration Area Along the Southeastern Margin	292
4.3.1	Huangling Uranium Deposit	292
4.3.2	Shuanglong Uranium Deposit	301
4.4	Geological Characteristics of the Uranium Ore Belt Along the Southwestern Margin	304
4.4.1	Huanxian Ore Spot	304
4.4.2	Pengyang-Jingchuan Deposit	308
4.5	Geological Characteristics of the Uranium Mineralization Belt in the Jinding Area	318
4.5.1	Metallogenic Geological Background	318
4.5.2	Geological Characteristics of Uranium Mineralization	320
4.6	Summary	322
	References	323
5	Basin Uranium Mineralization Law	325
5.1	Overview of Uranium Minerals	325
5.1.1	Tarangaole-Dongsheng Uranium Belt Along the Northeastern Margin of the Ordos Basin	325

5.1.2	Ningdong Uranium Belt Along the Western Margin of the Ordos Basin	326
5.1.3	The Huating–Jingchuan Uranium Deposit Belt Along the Southwestern Margin of the Ordos Basin	327
5.1.4	The Huangling Uranium Deposit Belt Along the Southeastern Margin of the Ordos Basin	327
5.2	Ore-Controlling Elements and Prospecting Signs	328
5.2.1	Ore-Controlling Elements	328
5.2.2	Prospecting Criteria	347
5.3	Regularity of Metallogeny	349
5.3.1	Time Distribution Law	350
5.3.2	Laws of Spatial Distribution	350
5.4	Summary	355
	References	356
6	Prospecting Methods, Prediction Models, and Metallogenic Prediction	357
6.1	Technical Prospecting Methods	357
6.1.1	Strategic Constituency	359
6.1.2	Drilling Verification and Effect	364
6.1.3	Determination of the Combination of Prospecting Technology and Methods	365
6.1.4	Demonstration of Selective Exploration	367
6.1.5	Secondary Development Technology System for Coal and Oilfield Data	367
6.2	Prospecting Forecast	369
6.2.1	Comprehensive Assessment of Ore-Controlling Elements	369
6.2.2	Prospecting Prediction Model	369
6.3	Mineralization Prediction and Analysis	375
6.3.1	Principles of Delineation of Scenic Spots	375
6.3.2	Features of the Scenic Spot	378
6.4	Summary	397
	References	398
	Appendix	399
