### Volume 1

**Foreword** *xvii*

**Preface** *xix*

### Section I Interplay of Light and Matter 1

<b>1</b>	<b>Physicochemical Aspects of Photoswitching</b>	<b>4</b>
	<i>Petr Klán and Jakob Wirz</i>	
1.1	Introduction	4
1.2	Essentials of Photophysics	5
1.2.1	Quantum Yield	6
1.2.2	Photostationary State	7
1.2.3	Photoactivation	7
1.3	Spectroscopy of Photoswitching	7
1.4	Two Case Examples	9
1.4.1	Diarylethenes	9
1.4.2	Azobenzene and Its Derivatives	12
	References	15
<b>2</b>	<b>Computational Methods and Photochromism</b>	<b>20</b>
	<i>Martial Boggio-Pasqua</i>	
2.1	Introduction	20
2.2	Basics of Computational Photochemistry	21
2.2.1	Electronic Structure Methods	21
2.2.2	Photochemical Pathway and Conical Intersections	23
2.3	Applications: Photoswitching Mechanisms of Photochromic Compounds	26
2.3.1	Dihydroazulene Photochromism	26
2.3.2	Dihydropyrene Photochromism	29
2.4	Conclusions and Perspectives	32
	References	33

<b>Section II</b>	<b>Chemical Classes of Molecular Photoswitches</b>	<b>39</b>
<b>3</b>	<b>Azobenzenes: The Quest for Visible Light Triggering</b>	<b>42</b>
	<i>Vanessa Koch and Stefan Bräse</i>	
3.1	Introduction	42
3.1.1	Azobenzene and Its Physical Characteristics	43
3.2	Synthesis of Azobenzenes	44
3.2.1	Synthesis of Symmetrical Azobenzenes by Oxidation of Anilines	44
3.2.2	Azo Coupling	45
3.2.3	Mills Reaction	45
3.2.4	Modern Methods	46
3.3	Visible Light-Activated Azobenzenes as Photoswitches	48
3.3.1	The Effect of Electron-Donating Groups on Direct Photoexcitation	49
3.3.2	The Effect of Electron-Withdrawing Groups on Direct Photoexcitation	50
3.3.3	Further Modification Leading to Visible Light Photoswitches	52
3.3.4	Complex Molecular and Supramolecular Systems Containing Azobenzenes	53
3.4	Applications of Azobenzenes in Biological Systems	53
3.5	Conclusion	58
	References	58
<b>4</b>	<b>Diazocines: Photoswitches with Excellent Photophysical Properties and Inverted Stabilities</b>	<b>66</b>
	<i>Rainer Herges and Pascal Lentz</i>	
4.1	Photophysical Properties and Conformations of Parent Diazocine	66
4.2	Synthesis of Diazocines	71
4.3	Heteroatom-Bridged Diazocines	73
4.4	Applications of Diazocines	75
4.5	Conclusion	78
	Acknowledgments	79
	References	79
<b>5</b>	<b>Azoheteroarenes</b>	<b>84</b>
	<i>Jake L. Greenfield, Aditya R. Thawani, Magdalena Odaybat, Rosina S.L. Gibson, Thomas B. Jackson, and Matthew J. Fuchter</i>	
5.1	Introduction	84
5.2	Synthetic Strategies Toward Azoheteroarenes	86
5.3	Structure-Property Relationships	88
5.3.1	Conformational Effects on Thermal Half-Life and $n-\pi^*$ Oscillator Strength	88
5.3.2	Choice of Heterocycle	90
5.3.3	6-Membered Heterocycles	91
5.3.4	5-Membered Heterocycles	94
5.3.5	Fused Heterocycles	95
5.3.6	External Influences	96
5.4	Photopharmacological Applications	96
5.4.1	Photoswitchable CENP-E Inhibitor	97
5.4.2	Photoswitchable Ligands for a TRPA1 Chemo-Optogenetic System	97
5.4.3	Further Pharmacological Applications of Azoheteroarenes	98
5.4.4	Glutathione Stability	101
5.5	Materials for Electronic Applications	102
5.5.1	Information Transfer	103
5.5.2	Switching in the Solid State	103
5.6	Azoheteroarenes in Supramolecular Chemistry	105
5.6.1	Modulation of Host-Guest Behavior	105
5.6.2	Photoswitchable Ligands	107
5.7	Energy-Storage Materials	107
5.8	Final Remarks	108
	References	109
<b>6</b>	<b>Arylhydrazones</b>	<b>114</b>
	<i>Baihao Shao and Ivan Aprahamian</i>	
6.1	Introduction	114
6.2	Acetyl/Aroyl-Based and Pyridyl-Based Photochromic Arylhydrazones	115
6.3	Phenylacetate-Based Photochromic Arylhydrazones	120
6.4	Applications of Bistable Photochromic Hydrazones	122
6.4.1	Kinetic Trapping of Nanostructures	122
6.4.1.1	Liquid Crystal-Based Smart Window	123
6.4.1.2	Shape-Persistent Photoactuator	124
6.4.1.3	Photoresponsive Drug Release	124
6.4.2	Switching on Metal Surfaces	125
6.5	Conclusion	127
	References	127
<b>7</b>	<b>Spiropyran – Multifaceted Chromic Compounds</b>	<b>132</b>
	<i>Luuk Kortekaas and Wesley R. Browne</i>	
7.1	Introduction	132
7.2	Thermochromic Spiropyran	132
7.3	Relative Stability of the Merocyanine Isomers	134
7.4	Photochromic Properties	137
7.5	Fluorescence	138
7.6	Acidochromism	139
7.7	Redox-Properties of Spiropyran	142
7.8	Photochemistry in the Solid State	143
7.9	Conclusions	144
	Acknowledgments	144
	References	144

- 8 Diarylethenes – Molecules with Good Memory** 152  
*Igor V. Komarov, Sergii Afonin, Oleg Babii, Tim Schober, and Anne S. Ulrich*
- 8.1 Introduction 152
- 8.2 Photochemical Behavior of Diarylethenes 154
- 8.3 Distinctive Properties of Diarylethene Photoswitches 160
- 8.3.1 Thermal Stability of the Photoforms 160
- 8.3.2 Photofatigue Resistance and Chemical Stability 163
- 8.3.3 Molecular Geometry and Electronic Changes Upon Photoisomerization 164
- 8.4 Synthesis of Diarylethenes 169
- 8.5 Conclusions and Outlook 171
- References 171
- 9 Fulgides and Fulgimides** 178  
*Falk Renth and Friedrich Temps*
- 9.1 Introduction 178
- 9.2 Photoswitching Properties 179
- 9.3 Synthesis 181
- 9.4 Effects of Chemical Structure 182
- 9.5 Ultrafast Photoswitching Dynamics 183
- 9.5.1 Photoisomerization Mechanism 183
- 9.5.2 Tuning by Chemical Structure 186
- 9.5.3 Implications for New Derivatives 188
- 9.6 Application Examples 188
- 9.7 Conclusions 189
- References 190
- 10 The Negative Photochromism of Dimethyldihydropyrene  $\pi$ -Switches** 194

- 11 Chiroptical Molecular Switches and Motors** 214  
*Brian P. Corbet, Anouk S. Lubbe, Stefano Crespi, and Ben L. Feringa*
- 11.1 Introduction 214
- 11.2 From Helical Overcrowded Alkenes to Unidirectional Rotary Molecular Motors 215
- 11.2.1 Chiroptical Molecular Switches 216
- 11.2.2 First- and Second-Generation Molecular Motors 217
- 11.2.3 Fundamental Rotational Steps 218
- 11.2.4 Third-Generation Rotary Molecular Motors 221
- 11.3 Dynamics and Kinetics of Molecular Motors 222
- 11.3.1 Thermal Isomerization 222
- 11.3.2 Tuning the Speed of Rotation 223
- 11.3.3 Photoisomerization 225
- 11.3.4 Tuning the Absorption Wavelength 228
- 11.3.5 Photochemical Motors 229
- 11.3.6 Novel Motor Core Designs 230
- 11.4 Applications 231
- 11.4.1 Transfer of Chirality 231
- 11.4.2 Transfer of Motion 235
- 11.4.2.1 Coupled Rotary Systems 235
- 11.4.2.2 Translation of Motion 236
- 11.4.2.3 Control Over Motion 238
- 11.4.3 Biological Applications 238
- 11.4.4 Other Applications 241
- 11.5 Perspective and Outlook 242
- References 243
- 12 Stilbenes Revisited: Understanding the Mechanism of Mechanochemical Coupling** 254  
*Robert T. O'Neill and Roman Boulatov*
- 12.1 Introduction 254
- 12.2 Stiff Stilbene as a Molecular Force Probe 256
- 12.2.1 Introduction to Polymer Mechanochemistry 256
- 12.2.2 The Importance of Model Studies in Polymer Mechanochemistry 257
- 12.2.3 Stiff Stilbene Is an Effective Molecular Force Probe 259
- 12.2.4 How Intrinsic Mechanochemical Reactivity Is Measured with Stiff Stilbene 260
- 12.2.5 How Stiff Stilbene Advanced Our Understanding of Mechanochemistry 265
- 12.2.5.1 The Restoring Force of a Stretched Monomer Predicts Its Reactivity Independent of How the Force Is Generated 265
- 12.2.5.2 Experimental Validation of a Simple Model of Mechanochemical Kinetics Over Complex Energy Landscapes 266
- 12.2.5.3 The Diversity of Force–Reactivity Relationships 267

- 12.3 Stilbenes in Fundamental Studies of Energy Transduction by Molecular Motors 271
- 12.3.1 Introduction to Molecular Machines 271
- 12.3.2 Minimalist Design of a Molecular Rotor Realized Using Stilbenes 273
- 12.4 Summary 276  
References 276
- 13 Indigoid Photoswitches 284**  
*Thomas Bartelmann and Henry Dube*
- 13.1 Indigo 284
- 13.2 Thioindigo 286
- 13.3 Hemiindigo 287
- 13.4 Hemithioindigo 290
- 13.5 Iminothioindoxyls 298
- 13.6 Oxindoles and Isoindolinones 300  
References 300
- 14 Donor–Acceptor Stenhouse Adducts 304**  
*Friedrich Stricker, Serena Seshadri, and Javier Read de Alaniz*
- 14.1 Introduction 304
- 14.2 DASA Synthesis 305
- 14.2.1 Molecular Photoswitch 305
- 14.2.2 Photoswitches in Macromolecules 308
- 14.3 Photoswitching Properties 310
- 14.3.1 Mechanism 310
- 14.3.2 The Absorption Properties 312
- 14.3.3 Dark Equilibria 312
- 14.3.4 Cyclization Efficiency Under Illumination 313
- 14.3.5 Electronic Effects 314
- 14.3.6 Steric Effects 314
- 14.3.7 Solvent Effects 315
- 14.3.8 Concentration Effects 315
- 14.3.9 Cyclization Under Exclusion of Light 316
- 14.3.10 Role of Water and Substituents on Cyclization and Ring Opening 316
- 14.4 Illustrative Applications 316
- 14.4.1 Polarity Change 318
- 14.4.2 Wavelength Selectivity 318
- 14.4.3 Sensing 319
- 14.4.4 Photothermal 320
- 14.5 Conclusion 320  
References 321
- 15 Imines as Threefold Functional Devices: Motional, Photochemical, Constitutional 326**  
*Lutz Greb, Ghislaine Vantomme, and Jean-Marie Lehn*
- 15.1 Introduction 326

- 15.2 Imine Photoswitches 326
- 15.2.1 Electronic Spectra and Photochemical *E/Z*-Isomerization of Imines 326
- 15.2.2 Thermal *E/Z*-Isomerization of Imines 327
- 15.2.3 Imines as Photoswitches 328
- 15.2.4 Imines as Light-Driven Molecular Motors 330
- 15.3 Acylhydrazone and Hydrazone Photoswitches 333
- 15.3.1 The Triple Dynamics of Imine-Based Photoswitches 333
- 15.3.2 The Consequences of Pyridyl-Hydrazones Shape Switching 335
- 15.3.2.1 Photo-Responsive Receptor 335
- 15.3.2.2 Switchable Catalysis 336
- 15.3.2.3 Control of Supramolecular Polymerization 337
- 15.3.2.4 The Dynamics of Molecular Movements 337
- 15.3.2.5 Adaptation 337
- 15.3.3 Constitutional Dynamic Networks 338
- 15.3.3.1 Photoswitching of Constitutional Dynamic Networks 338
- 15.3.3.2 Photoswitching in Dynamic Covalent Chemistry: The Photodynamic Covalent Bond 340
- 15.4 Conclusion 340

**18 Emerging Molecular Photoswitches 402***Peter Gödtel and Zbigniew L. Pianowski*

- 18.1 Introduction 402
- 18.2 Natural Chromophore Mimetics 402
  - 18.2.1 Molecular Photoswitches Inspired by Retinal 402
  - 18.2.2 Molecular Photoswitches Inspired by the Green Fluorescent Protein (GFP) 404
    - 18.2.2.1 Mechanistic Details of Thermal Relaxation 405
    - 18.2.2.2 Benzylidene–Oxazolones 406
    - 18.2.2.3 Imidazolinone Derivatives 408
    - 18.2.2.4 Photopharmacology of the Emerging Molecular Photoswitches 408
    - 18.2.2.5 Boronated Acyl-Hydrazones 410
- 18.3 Isoindolinones 410
- 18.4 Iminothioindoxyls 412
- 18.5 Photoswitching of Molecular Magnetism 414
  - 18.5.1 Switching MRI Responsiveness 416
- 18.6 Summary 417
- References 422

**19 Photochromism of Coordination Compounds 426***Nathan Man-Wai Wu, Chi-Chiu Ko, and Vivian Wing-Wah Yam*

- 19.1 Introduction 426
- 19.2 Differences in Photochromic Reactivity and Photochromism upon Coordination 427
  - 19.2.1 Photophysical Properties 427
  - 19.2.2 Photosensitized Photochromism 428
  - 19.2.3 Near-Infrared (NIR) Photochromism by Coordination-Induced Perturbation 434
  - 19.2.4 Gated Photochromism 435
  - 19.2.5 Multiple Addressable/Multi-State Photochromism 440
- 19.3 Conclusion 447
- References 448

**20 Versatile Photoswitchable Molecules in Catalysis 456***Jie Li and Stefan Hecht*

- 20.1 Introduction 456
- 20.2 Design Strategy of Photoswitchable Catalysts 457
  - 20.2.1 Photoswitchable Catalysts Based on *E/Z* Isomerization 457
  - 20.2.2 Photoswitchable Catalysts Based on Electrocyclization 457
- 20.3 Formation of Carbon–Carbon Bonds 458
  - 20.3.1 Michael Addition 458
  - 20.3.2 Henry Reaction 460
  - 20.3.3 Morita–Baylis–Hillman Reaction 461
  - 20.3.4 Asymmetric Heck Reaction 462
  - 20.3.5 Steglich Rearrangement 462
  - 20.3.6 Stereoselective Cyclopropanation Reaction 463
  - 20.3.7 Ring-Closing Metathesis and Ring-Opening Metathesis Polymerization of Cyclic Olefins 463
- 20.3.8 Enantioselective Dialkylzinc Addition Reactions 464
- 20.4 Formation of Carbon–Heteroatom Bonds 464
  - 20.4.1 Asymmetric Thio-Michael Reaction 465
  - 20.4.2 Asymmetric Allylic Alkylation Reaction 466
  - 20.4.3 Hydrolysis of Esters and Glycosides 467
  - 20.4.4 Ethanolysis of Tertiary Anilides, Transesterification, and Amidation Reactions 468
  - 20.4.5 Cycloaddition Reactions of CO<sub>2</sub> and Epoxides 470
  - 20.4.6 Alkene and Alkyne Hydroboration 470
  - 20.4.7 Ring-Opening Polymerization of Lactones 471
- 20.5 Formation of Carbon–Hydrogen/Deuterium Bonds 472
  - 20.5.1 Racemization of  $\alpha$ -Amino Acids 472
- 20.6 Conclusion and Outlook 473
- References 474

## Volume 2

Foreword xvii

Preface xix

## Section III Materials Based on Molecular Photoswitches 477

- 21 **Multinary Photoswitches** 480  
*Andreas H. Heindl and Hermann A. Wegner*
- 22 **Photoinduced Reversible Solid-to-Liquid Transitions of Photochromic Materials** 500  
*Chengwei Liu, Shaodong Sun, and Si Wu*
- 23 **En Route to Ultrafast Switchable Azo Dyes** 524  
*Jaume Garcia-Amorós and Dolores Velasco*
- 24 **Photoswitchable Ion Receptors** 542  
*Alketa Lutolli and Amar H. Flood*
- 25 **Molecular Switches in Light-Responsive Liquid-Crystalline Polymer Actuators** 566  
*Albert P. H. J. Schenning, Hong Yang, Sebastian Fredrich, and Li Liu*
- 26 **Molecular Photoswitches in Liquid Crystals** 580  
*Alexander Ryabchun and Nathalie Katsonis*
- 27 **Photoswitchable Fluorophores for Super-Resolution Optical Microscopy** 606  
*Kakishi Uno, Vladimir N. Belov, and Mariano L. Bossi*
- 28 **Photochromic Nanoparticles: From Fluorescence to Assembly** 628  
*Rémi Métivier, Nicolas Fabre, Ashkan Mokhtar, and Tuyoshi Fukaminato*
- 29 **Photomechanical Performance of Diarylethene Single Crystals** 680  
*Masakazu Morimoto*
- 30 **Light-Responsive Metal–Organic Frameworks Based on Photochromic Molecules** 696  
*Zejun Zhang, Yunzhe Jiang, Peng Qin, and Lars Heinke*
- 31 **Molecular Switches and Motors in 2-D** 712  
*Jiří Kaleta*

- 32 **Light-Driven Molecular Machines** 736  
*Alberto Credi, Serena Silvi, and Massimo Baroncini*
- 33 **Molecular Photoswitches for Information Processing: From Simple to Complex** 786  
*Joakim Andréasson and Uwe Pischel*
- Section IV Photomodulation of Biological Systems 811
- 34 **In Vivo Applications of Photoswitchable Bioactive Compounds** 814  
*Alexandre M.J. Gomila and Pau Gorostiza*
- 35 **Molecular Photoswitches in Antimicrobial Photopharmacology** 844  
*Mafalda Bispo, Jan Maarten van Dijl, and Wiktor Szymanski*
- 36 **Photoswitchable Cytotoxins** 874  
*Oliver Thorn-Seshold*
- 37 **Photopharmacology of G-Protein-Coupled Receptors** 922  
*Silvia Panarello, Xavier Rovira, Amadeu Llebaria, and Xavier Gómez-Santacana*
- 38 **Photoswitching of Ion Channels** 946  
*Timm Fehrentz and Johannes Broichhagen*
- 39 **Molecular Switches as Building Blocks for DNA and RNA** 974  
*Hans-Achim Wagenknecht*
- 40 **Photoswitchable Peptides and Proteins** 988  
*Susanne Kirchner, Anna-Lena Leistner, and Zbigniew L. Pianowski*
- 41 **Photochromic Carbohydrate Conjugates** 1016  
*Guillaume Despras, Vivek Poonthiyil, and Thisbe K. Lindhorst*
- 42 **Building a Smart Molecular Robot by Combining a Motor Protein and a Molecular Photo-Switch** 1048  
*Nobuyuki Tamaoki*
- 43 **Computational Design of Photochromic Proteins** 1060  
*Elliott M. Dolan and Sagar D. Khare*
- Index 1085
