

# Contents

## Part I Ordinary Differential Equations

<b>1</b>	<b>Linear Differential Equations</b> . . . . .	3
1.1	Fundamental Theorem for First-Order Equations . . . . .	3
1.2	Differentiability of the Solution . . . . .	6
1.3	Linear Differential Equations of Second Order . . . . .	9
1.4	Sturm-Liouville Problems . . . . .	12
1.5	Singular Points of Linear Differential Equations . . . . .	16
1.6	Fundamental Properties of the Heun Equation . . . . .	20
<b>2</b>	<b>Non-linear Equations</b> . . . . .	25
2.1	First Examples of Non-linear Ordinary Differential Equations . . . . .	25
2.2	Non-linear Differential Equations in the Complex Domain . . . . .	30
2.3	Integrals Not Holomorphic at the Origin . . . . .	33

## Part II Linear Elliptic Equations

<b>3</b>	<b>Harmonic Functions</b> . . . . .	41
3.1	Motivations for the Laplace Equation . . . . .	41
3.2	Geometry of the Second Derivatives in the Laplacian . . . . .	42
3.3	The Three Green Identities . . . . .	43
3.4	Mean-Value Theorem . . . . .	47
3.5	The Weak Maximum Principle . . . . .	50
3.6	Derivative Estimates . . . . .	51
	Appendix 3.a: Frontier of a Set and Manifolds with Boundary . . . . .	52
<b>4</b>	<b>Mathematical Theory of Surfaces</b> . . . . .	53
4.1	Quadratic Differential Forms . . . . .	53
4.2	Invariants and Differential Parameters . . . . .	54
4.3	Differential Parameters of First Order . . . . .	56

4.4	Equivalence of Quadratic Forms; Christoffel Formulae . . . . .	57
4.5	Properties of Christoffel Symbols . . . . .	59
4.6	The Laplacian Viewed as a Differential Parameter of Order 2. . . . .	61
4.7	Isothermal Systems . . . . .	63
4.8	Holomorphic Functions Associated with Isothermal Systems. . . . .	65
4.9	Isothermal Parameters . . . . .	66
4.10	Lie Theorem on the Lines of an Isothermal System . . . . .	68
<b>5</b>	<b>Distributions and Sobolev Spaces. . . . .</b>	<b>71</b>
5.1	The Space $\mathcal{D}(\Omega)$ and Its Strong Dual . . . . .	71
5.2	The Space $C^{1,\alpha}(\Omega)$ and Its Abstract Completion. . . . .	73
5.3	The Sobolev Space $H^{1,\alpha}(\Omega)$ . . . . .	74
5.4	The Spaces $C^{k,\alpha}$ and $H^{k,\alpha}$ . . . . .	75
5.5	The Trace Map for Elements of $H^{k,\alpha}(\Omega)$ . . . . .	76
5.6	The Space $H_0^{k,\alpha}(\Omega)$ and Its Strong Dual . . . . .	77
5.7	Sub-spaces of $H^{k,\alpha}(\mathbb{R}^n)$ . . . . .	79
5.8	Fundamental Solution and Parametrix of a Linear Equation . . . . .	80
	Appendix 5.a: Some Basic Concepts of Topology . . . . .	82
<b>6</b>	<b>The Caccioppoli-Leray Theorem . . . . .</b>	<b>85</b>
6.1	Second-Order Linear Elliptic Equations in $n$ Variables. . . . .	85
6.2	The Leray Lemma and Its Proof. . . . .	86
6.3	Caccioppoli's Proof of Integral Bounds: Part 1. . . . .	88
6.4	Caccioppoli's Proof of Integral Bounds: Part 2. . . . .	93
<b>7</b>	<b>Advanced Tools for the Caccioppoli-Leray Inequality . . . . .</b>	<b>103</b>
7.1	The Concept of Weak Solution. . . . .	103
7.2	Caccioppoli-Leray for Elliptic Systems in Divergence Form. . . . .	104
7.3	Legendre versus Legendre-Hadamard Conditions . . . . .	109
7.4	Uniform, or Strong, or Uniform Strong, or Proper Ellipticity . . . . .	110
<b>8</b>	<b>Aspects of Spectral Theory. . . . .</b>	<b>113</b>
8.1	Resolvent Set, Spectrum and Resolvent of a Linear Operator . . . . .	113
8.2	Modified Resolvent Set and Modified Resolvent . . . . .	114
8.3	Eigenvalues and Characteristic Values . . . . .	116
8.4	Directions of Minimal Growth of the Resolvent . . . . .	117
8.5	Decay Rate of the Resolvent Along Rays. . . . .	118
8.6	Strongly Elliptic Boundary-Value Problems, and an Example . . . . .	119

<b>9</b>	<b>Laplace Equation with Mixed Boundary Conditions</b> . . . . .	123
9.1	Uniqueness Theorems with Mixed Boundary Conditions . . . . .	123
9.2	The De Giorgi Family of Solutions . . . . .	124
9.3	De Giorgi's Clever use of the Characteristic Function of a Set . . . . .	126
9.4	Perimeter of a Set and Reduced Frontier of Finite-Perimeter Sets . . . . .	132
<b>10</b>	<b>New Functional Spaces: Morrey and Campanato</b> . . . . .	135
10.1	Morrey and Campanato Spaces: Definitions and Properties . . .	135
10.2	Functions of Bounded Mean Oscillation, and an Example . . .	140
10.3	Glancing Backwards: The Spaces $W_{Loc}^{1,p}$ and $W^{1,p}$ . . . . .	140
10.4	How Sobolev Discovered His Functional Spaces . . . . .	142
<b>11</b>	<b>Pseudo-Holomorphic and Polyharmonic Frameworks</b> . . . . .	157
11.1	Local Theory of Pseudo-Holomorphic Functions . . . . .	157
11.2	Global Theory of Pseudo-Holomorphic Functions . . . . .	162
11.3	Upper and Lower Bound for the Increment Ratio . . . . .	163
11.4	Decomposition Theorem for Biharmonic Functions . . . . .	165
11.5	Boundary-Value Problems for the Biharmonic Equation . . . . .	167
11.6	Fundamental Solution of the Biharmonic Equation . . . . .	169
11.7	Mean-Value Property for Polyharmonic Functions . . . . .	171
<b>Part III Calculus of Variations</b>		
<b>12</b>	<b>The Euler Equations</b> . . . . .	177
12.1	Statement of the Problem . . . . .	177
12.2	The Euler Integral Condition . . . . .	178
12.3	The Euler Differential Condition . . . . .	179
12.4	Variational Problem with Constraints . . . . .	180
<b>13</b>	<b>Classical Variational Problems</b> . . . . .	183
13.1	Isoperimetric Problems . . . . .	183
13.2	Double Integrals and Minimal Surfaces . . . . .	186
13.3	Minimal Surfaces and Functions of a Complex Variable . . . . .	188
13.4	The Dirichlet Boundary-Value Problem . . . . .	194
<b>Part IV Linear and Non-linear Hyperbolic Equations</b>		
<b>14</b>	<b>Characteristics and Waves, 1</b> . . . . .	203
14.1	Systems of Partial Differential Equations . . . . .	203
14.2	Characteristic Manifolds for First- and Second-Order Systems . . . . .	205
14.3	The Concept of Wavelike Propagation . . . . .	209
14.4	The Concept of Hyperbolic Equation . . . . .	212

14.5	Riemann Kernel for a Hyperbolic Equation in 2 Variables . . . .	214
14.6	Lack of Smooth Cauchy Problem for the Laplace Equation . . . . .	218
<b>15</b>	<b>Characteristics and Waves, 2</b> . . . . .	221
15.1	Wavelike Propagation for a Generic Normal System . . . . .	221
15.2	Cauchy's Method for Integrating a First-Order Equation . . . . .	224
15.3	The Bicharacteristics . . . . .	229
15.4	Space-Time Manifold; Arc-Length; Geodesics . . . . .	229
<b>16</b>	<b>Fundamental Solution and Characteristic Conoid</b> . . . . .	233
16.1	Relation Between Fundamental Solution and Riemann's Kernel . . . . .	233
16.2	The Concept of Characteristic Conoid . . . . .	235
16.3	Fundamental Solutions with an Algebraic Singularity . . . . .	236
16.4	Geodesic Equations with and Without Reparametrization Invariance . . . . .	238
<b>17</b>	<b>How to Build the Fundamental Solution</b> . . . . .	241
17.1	Hamiltonian Form of Geodesic Equations . . . . .	241
17.2	The Unique Real-Analytic World Function . . . . .	244
17.3	Fundamental Solution with Odd Number of Variables . . . . .	246
17.4	Convergence of the Power Series for $U$ . . . . .	249
<b>18</b>	<b>Examples of Fundamental Solutions</b> . . . . .	253
18.1	Even Number of Variables and Logarithmic Term . . . . .	253
18.2	Smooth Part of the Fundamental Solution . . . . .	255
18.3	Parametrix of Scalar Wave Equation in Curved Space-Time . . . . .	255
18.4	Non-linear Equations for Amplitude and Phase Functions . . . . .	257
18.5	Tensor Generalization of the Ermakov-Pinney Equation . . . . .	259
18.6	Damped Waves . . . . .	260
<b>19</b>	<b>Linear Systems of Normal Hyperbolic Form</b> . . . . .	263
19.1	Einstein Equations and Non-linear Theory . . . . .	263
19.2	Equations Defining the Characteristic Conoid . . . . .	265
19.3	A Domain of the Characteristic Conoid . . . . .	267
19.4	Integral Equations for Derivatives of $x^i$ and $p_i$ . . . . .	269
19.5	Relations on the Conoid Satisfied by the Unknown Functions . . . . .	270
19.6	The Auxiliary Functions $\sigma_s^r$ . . . . .	271
19.7	Integrating Linear Combinations of the Equations . . . . .	273
19.8	Determination of the Auxiliary Functions $\sigma_s^r$ . . . . .	274
19.9	Evaluation of the $\omega_s^r$ . . . . .	275
19.10	Calculation of $\sigma$ . . . . .	276

19.11	Derivatives of the Functions $\sigma_s^r$ . . . . .	278
19.12	Behaviour in the Neighbourhood of the Vertex . . . . .	280
19.13	Behaviour in the Neighbourhood of $\lambda_1 = 0$ . . . . .	281
19.14	First Derivatives . . . . .	285
19.15	Reverting to the Functions $\sigma_s^r$ . . . . .	286
19.16	Study of $\sigma$ and Its Derivatives . . . . .	288
19.17	Derivatives of the $\omega_s^r$ . . . . .	292
19.18	Kirchhoff Formulae . . . . .	293
19.19	Evaluation of the Area and Volume Elements . . . . .	294
19.20	Limit as $\eta \rightarrow 0$ of the Integral Relations . . . . .	295
19.21	Reverting to the Kirchhoff Formulae . . . . .	296
19.22	Summary of the Results . . . . .	297
19.23	Transformation of Variables . . . . .	298
19.24	Application of the Results . . . . .	300
19.25	Linear Systems of Second Order . . . . .	301
<b>20</b>	<b>Linear System from a Non-linear Hyperbolic System</b> . . . . .	<b>303</b>
20.1	Non-linear Equations . . . . .	303
20.2	Differentiation of the Equations ( $F$ ) . . . . .	304
20.3	Application of the Results of Chap. 19 . . . . .	306
20.4	Cauchy Data . . . . .	306
20.5	Summary of Results . . . . .	308
20.6	Solution of the Cauchy Problem for Non-linear Equations . . . . .	311
<b>21</b>	<b>Cauchy Problem for General Relativity</b> . . . . .	<b>313</b>
21.1	The Equations of Einstein's Gravity . . . . .	313
21.2	Vacuum Einstein Equations and Isothermal Coordinates . . . . .	314
21.3	Solution of the Cauchy Problem for the Equations $G_{\alpha\beta} = 0$ . . . . .	315
21.4	The Solution of $G_{\alpha\beta} = 0$ Verifies the Conditions of Isothermy . . . . .	316
21.5	Uniqueness of the Solution . . . . .	318
<b>22</b>	<b>Causal Structure and Global Hyperbolicity</b> . . . . .	<b>321</b>
22.1	Causal Structure of Space-Time . . . . .	321
22.2	Strong Causality . . . . .	322
22.3	Stable Causality . . . . .	323
22.4	Global Hyperbolicity . . . . .	324
<b>Part V Parabolic Equations</b>		
<b>23</b>	<b>The Heat Equation</b> . . . . .	<b>329</b>
23.1	A Summary on Linear Equations in Two Independent Variables . . . . .	329
23.2	Fundamental Solution of the Heat Equation . . . . .	330

<b>24</b>	<b>The Nash Theorem on Parabolic Equations</b> . . . . .	335
24.1	The Moment Bound . . . . .	335
24.2	The $G$ Bound . . . . .	344
24.3	The Overlap Estimate . . . . .	350
24.4	Time Continuity . . . . .	352
<b>Part VI Fuchsian Functions</b>		
<b>25</b>	<b>The Poincaré Work on Fuchsian Functions</b> . . . . .	357
25.1	Properties of Fuchsian Functions . . . . .	357
25.2	$\Theta$ -Fuchsian Functions . . . . .	359
25.3	System of $\zeta$ -Fuchsian Functions . . . . .	360
<b>26</b>	<b>The Kernel of (Laplacian Plus Exponential)</b> . . . . .	363
26.1	Motivations for the Analysis . . . . .	363
26.2	The $u$ Function . . . . .	365
26.3	Klein Surfaces . . . . .	373
26.4	The $U$ Function . . . . .	377
	Appendix: Vertices in the Theory of Fuchsian Functions . . . . .	381
<b>Part VII The Riemann <math>\zeta</math>-Function</b>		
<b>27</b>	<b>The Functional Equations of Number Theory</b> . . . . .	387
27.1	The Euler Theorem on Prime Numbers and the $\zeta$ -function . . . . .	387
27.2	$\Gamma$ - and $\zeta$ -Function from the Jacobi Function . . . . .	389
27.3	The $\xi$ -function: Its Functional Equation and Its Integral Representation . . . . .	392
27.4	Logarithm of the $\zeta$ -Function . . . . .	393
27.5	The Riemann Hypothesis on Non-trivial Zeros of the $\zeta$ -Function . . . . .	400
<b>Part VIII A Window on Modern Theory</b>		
<b>28</b>	<b>The Symbol of Pseudo-Differential Operators</b> . . . . .	405
28.1	From Differential to Pseudo-Differential Operators . . . . .	405
28.2	The Symbol of Pseudo-Differential Operators on Manifolds . . . . .	407
28.3	Geometry Underlying the Symbol Map . . . . .	408
28.4	Symbol and Leading Symbol as Equivalence Classes . . . . .	413
28.5	A Smooth Linear Equation Without Solution . . . . .	417
28.6	Solving Pseudo-Differential Equations . . . . .	422
