1	Introduction	1
1.1	So What Is a Mathematical Model?	2
1.2	State Variables and Parameters	4
1.3	Methods and Challenges	5
1.4	Model Reduction	6
	References	7
2	Algebraic Models	9
2.1	Temperature and the Chirping of a Cricket	9
2.2	Least Squares Fitting of Data	11
2.2.1	Linear Least Squares Fit	11
2.2.2	Quadratic Least Squares Fit	13
2.2.3	General Discrete Least Squares	15
2.2.4	Cricket Model Revisited	16
2.2.5	Model Selection	18
2.2.6	Nonlinear Discrete Least Squares	19
2.2.7	Gauss-Newton's Method	20
2.3	The Global Positioning System	22
2.3.1	Algebraic Equations for GPS Location	22
2.3.2	Solution via Gauss-Newton's Method	24
2.3.3	Accuracy	25
2.4	Allometric Models	27
2.4.1	Kleiber's Law	28
2.5	Dimensional Analysis	29
2.5.1	Free Fall of an Object	30
2.5.2	Inspection Method	31
2.5.3	Buckingham Pi Theorem and Method	32
2.5.4	Allometric Model of Atomic Bomb Blast	34
2.6	Exercises	36
	References	42

3	Discrete Models	43
3.1	Malthusian Growth Model	43
3.2	Economic Interest Models	45
	3.2.1 Compound Interest	45
	3.2.2 Loans and Amortization	46
3.3	Time-Dependent Growth Rate	48
	3.3.1 General Population Model	48
	3.3.2 Nonautonomous Malthusian Growth Model	48
	3.3.3 Logistic and Beverton-Holt Models	50
3.4	Qualitative Analysis of Discrete Models	51
3.5	Ricker's Model of Salmon Population	55
	3.5.1 Salmon Population in the Skeena River	55
	3.5.2 Analysis of the Ricker's Model	59
3.6	Heat Exchange	60
3.7	Newton's Method	62
3.8	Periodic Points and Bifurcations	63
	3.8.1 Chain Rule and Stability	65
	3.8.2 Period Doubling	66
3.9	Chaos	72
	3.9.1 Sensitive Dependence	72
	3.9.2 Lyapunov Exponents	73
3.10	Exercises	78
	References	83
4	Continuous Models	85
4.1	Introduction	85
4.2	Chemostat	85
	4.2.1 Continuous Model of Yeast Growth	86
	4.2.2 Logistic Growth Model	88
4.3	Qualitative Analysis of Continuous Models	91
	4.3.1 Direction Fields and Phase Portraits in 1D	93
	4.3.2 Stable Manifold Theorem	95
	4.3.3 Phase Portraits	98
4.4	A Laser Beam Model	100
	4.4.1 Equilibria for Laser	101
	4.4.2 Visualization of Laser Model	102
4.5	Two Species Competition Model	103
	4.5.1 Qualitative Analysis	103
	4.5.2 Fitting a Competition Model to Yeast Data	108
4.6	Predator-Prey Model	111
	4.6.1 Sharks and Food Fish	111
	4.6.2 Lotka-Volterra Model	112
4.7	Method of Averaging	114
	4.7.1 Quasilinear ODE and Lagrange Standard Form	117

4.8	Linear and Nonlinear Oscillators	118
4.8.1	Linear Oscillators	118
4.8.2	Conversion to a System of Differential Equations	122
4.8.3	Duffing Oscillator	124
4.8.4	Van der Pol Oscillator	129
4.8.5	The FitzHugh-Nagumo Model	135
4.9	Crystal Oscillators	140
4.9.1	Two-Mode Oscillator Model	141
4.9.2	Kirchoff's Law of Circuits	142
4.9.3	Averaging	145
4.10	Fluxgate Magnetometer	147
4.10.1	Bistability	149
4.10.2	What is a Fluxgate Magnetometer	151
4.10.3	How Does a Fluxgate Magnetometer Work?	151
4.10.4	Modeling Single-Core Dynamics	153
4.11	Compartmental Models	158
4.11.1	General Setting	159
4.11.2	COVID-19 Modeling	160
4.12	Exercises	162
