Contents

Introduction 1
1. This is a book... 1
2. How to use this book 2
3. About the English edition 3
4. Acknowledgements 3

I. Affine Geometry 7
1. Affine spaces 7
2. Affine mappings 14
3. Using affine mappings: three theorems in plane geometry 23
4. Appendix: a few words on barycenters 26
5. Appendix: the notion of convexity 28
6. Appendix: Cartesian coordinates in affine geometry 30
Exercises and problems 32

II. Euclidean Geometry, Generalities 43
1. Euclidean vector spaces, Euclidean affine spaces 43
2. The structure of isometries 46
3. The group of linear isometries 52
Exercises and problems 58

III. Euclidean Geometry in the Plane 65
1. Angles 65
2. Isometries and rigid motions in the plane 76
3. Plane similarities 79
4. Inversions and pencils of circles 83
Exercises and problems 98

IV. Euclidean Geometry in Space 113
1. Isometries and rigid motions in space 113
2. The vector product, with area computations 116
3. Spheres, spherical triangles 120
4. Polyhedra, Euler formula 122
5. Regular polyhedra 126
Exercises and problems 130

V. Projective Geometry 143
1. Projective spaces 143
2. Projective subspaces 145

3. Affine *vs* projective 147
4. Projective duality 153
5. Projective transformations 155
6. The cross-ratio 161
7. The complex projective line and the circular group 164
Exercises and problems 170

VI. Conics and Quadrics 183
1. Affine quadrics and conics, generalities 184
2. Classification and properties of affine conics 189
3. Projective quadrics and conics 200
4. The cross-ratio of four points on a conic and Pascal's theorem .. 208
5. Affine quadrics, *via* projective geometry 210
6. Euclidean conics, *via* projective geometry 215
7. Circles, inversions, pencils of circles 219
8. Appendix: a summary of quadratic forms 225
Exercises and problems 233

VII. Curves, Envelopes, Evolutes 247
1. The envelope of a family of lines in the plane 248
2. The curvature of a plane curve 254
3. Evolutes 256
4. Appendix: a few words on parametrized curves 258
Exercises and problems 261

VIII. Surfaces in 3-dimensional Space 269
1. Examples of surfaces in 3-dimensional space 269
2. Differential geometry of surfaces in space 271
3. Metric properties of surfaces in the Euclidean space 284
4. Appendix: a few formulas 294
Exercises and problems 296

A few Hints and Solutions to Exercises 301
Chapter I 301
Chapter II 304
Chapter III 306
Chapter IV 314
Chapter V 321
Chapter VI 326
Chapter VII 332
Chapter VIII 336

Bibliography 343
