| <i>List of contributors</i>  | xiv |
| 1 Introduction: political economy of the environment in the century of ecological crises | 1   |
| <i>Éloi Laurent and Klara Zwickl</i>   |     |
| <i>What is political economy of the environment?</i>                                     | 1   |
| <i>Inequality and the environment: from blind spots to linkages</i>                      | 3   |
| <i>The purposes, structure, and substance of this handbook</i>                           | 6   |
| 2 Political economy of the environment: a look back and ahead                            | 13  |
| <i>James K. Boyce</i>  |     |
| <i>Inequality and the environment: positive issues</i>                                   | 14  |
| <i>Power and social decisions</i>  | 14  |
| <i>Inequality and the direction of environmental harm</i>                                | 14  |
| <i>Inequality and the magnitude of environmental degradation</i>                         | 16  |
| <i>Values and the environment: normative issues</i>                                      | 18  |
| <i>Efficiency</i>  | 18  |
| <i>Safety</i>  | 19  |
| <i>Sustainability</i>  | 20  |
| <i>Justice</i>   | 21  |
| <i>Multiple criteria and incomplete orderings</i>  | 22  |
| <i>Concluding remarks</i>  | 22  |

|  |           |
|--|-----------|
| <b>PART 1</b>  |           |
| <b>Inequality and the environment</b>  | <b>27</b> |
| 3 The sustainability–justice nexus   | 29        |
| <i>Éloi Laurent</i>  |           |
| <i>Introduction: the social-ecological approach</i>  | 29        |
| <i>Tacking stock of our twin crises</i>  | 30        |
| <i>How inequality pollutes the planet</i>  | 32        |
| <i>Inequality increases the need for environmentally harmful and socially unnecessary economic growth</i>  | 32        |
| <i>Inequality increases the ecological irresponsibility of the richest, within each country and among nations</i>  | 33        |
| <i>Inequality, which affects the health of individuals and groups, diminishes the social-ecological resilience of communities and societies and weakens their collective ability to adapt to accelerating environmental change</i> | 34        |
| <i>Inequality hinders collective action aimed at preserving natural resources</i>  | 34        |
| <i>Inequality reduces the political acceptability of environmental preoccupations and the ability to offset the potential socially regressive effects of environmental policies</i>  | 36        |
| <i>The rise of environmental inequality</i>  | 37        |
| <i>Air pollution</i>   | 39        |
| <i>Risk, noise, and chemical pollution</i>   | 40        |
| <i>Exposure to social-ecological disasters</i>   | 41        |
| <i>Conclusion: toward a social-ecological policy</i>   | 43        |
| 4 A socio-metabolic perspective on (material) growth and inequality  | 47        |
| <i>Anke Schaffartzik and Fridolin Krausmann</i>  |           |
| <i>Introduction: global growth and inequality</i>  | 47        |
| <i>Concepts: a socio-metabolic perspective</i>   | 48        |
| <i>Material inequality</i>   | 50        |
| <i>Material inequality in the global economy</i>   | 50        |
| <i>Metabolic regimes and transitions</i>   | 53        |
| <i>Inequality in control over material flows</i>   | 54        |
| <i>The inertia of growth</i>   | 55        |
| <i>Conclusion: transforming growth</i>   | 56        |
| 5 The history of environmental and energy economics through the lens of political economy  | 60        |
| <i>Antoine Missemer</i>  |           |
| <i>Introduction</i>  | 60        |
| <i>Natural capital in the 1900s</i>  | 61        |
| <i>Decoupling in the 1920s</i>   | 65        |
| <i>Conclusion</i>  | 68        |
