Preface to the second edition	ix
Notation	xi
Preface to the first edition	xiii
Introduction	xv
I Algebraic structures	1
1 Residue classes of integers	1
2 Groupoids	7
3 Isomorphisms of groupoids	19
4 Groups. Examples of groups	28
5 Cyclic groups. Order of elements in groups	36
6 Groups of permutations	43
7 Partitions via subgroups. Lagrange's Theorem	51
8 Normal subgroups, congruences on groups and factor groups	59
9 Classification of finite groups up to order 15	68
10 Rings and subrings. Isomorphisms of rings	74
11 Integral domains, division rings and fields	85
12 Ideals, congruences on rings and factor rings	95
13 Algebraic equations over integral domains	104
II Polynomial algebra	115
14 Polynomials in one indeterminate	115
15 Polynomial functions of one variable	122
16 Divisibility of polynomials	127
17 Decompositions of polynomials	137

18	Roots of polynomial functions	142
19	Polynomial functions with complex, real and integer coefficients	147
20	Derivatives of polynomials	153
21	Polynomials in several indeterminates	162
22	Solving binomial equations	170
23	Quadratic and cubic equations over \mathbb{C}	174
24	Reciprocal equations	180
25	Numerical methods for solving algebraic equations	186
III Linear algebra		197
26	Matrices	197
27	Systems of linear equations	208
28	Systems of linear equations with a unique solution and invertible matrices	224
29	Determinants	231
30	Vector spaces and subspaces	245
31	Finitely-generated vector spaces. Linear independence, base, dimension	257
32	The subspaces associated to matrices and the spaces of all solutions of homogeneous systems of linear equations	269
33	Linear and direct sums of subspaces	282
34	Linear maps	287
35	Euclidean vector spaces	300
IV Answers or solutions to exercises		315
Chapters 1-6 (Veronika Remenárová)		315
Chapters 7-13 (Miroslav Haviar)		331
Chapters 14-25 (Veronika Remenárová)		343

Contents

vii

Chapters 26-35 (Miroslav Haviar)
