

## Table of Contents

### The “Spectral” Decomposition for One-Dimensional Maps

Alexander M. Blokh

1.	Introduction and Main Results .....	1
1.0.	Preliminaries .....	1
1.1.	Historical Remarks .....	2
1.2.	A Short Description of the Approach Presented .....	3
1.3.	Solenoidal Sets .....	4
1.4.	Basic Sets .....	5
1.5.	The Decomposition and Main Corollaries .....	7
1.6.	The Limit Behavior and Generic Limit Sets for Maps Without Wandering Intervals .....	8
1.7.	Topological Properties of Sets $\overline{Per\ f}$ , $\omega(f)$ and $\Omega(f)$ .....	9
1.8.	Properties of Transitive and Mixing Maps .....	10
1.9.	Corollaries Concerning Periods of Cycles for Interval Maps .....	11
1.10.	Invariant Measures for Interval Maps .....	12
1.11.	The Decomposition for Piecewise-Monotone Maps .....	16
1.12.	Properties of Piecewise-Monotone Maps of Specific Kinds .....	20
1.13.	Further Generalizations .....	23
2.	Technical Lemmas .....	25
3.	Solenoidal Sets .....	27
4.	Basic Sets .....	28
5.	The Decomposition .....	33
6.	Limit Behavior for Maps Without Wandering Intervals .....	36
7.	Topological Properties of the Sets $\overline{Per\ f}$ , $\omega(f)$ and $\Omega(f)$ .....	37
8.	Transitive and Mixing Maps .....	42
9.	Corollaries Concerning Periods of Cycles .....	47
10.	Invariant Measures .....	49
11.	Discussion of Some Recent Results of Block and Coven and Xiong Jincheng .....	53
	References .....	55

**A Constructive Theory of Lagrangian Tori and Computer-assisted Applications***A. Celletti, L. Chierchia*

1.	Introduction .....	60
2.	Quasi-Periodic Solutions and Invariant Tori for Lagrangian Systems: Algebraic Structure .....	61
2.1.	Setup and Definitions .....	61
2.2.	Approximate Solutions and Newton Scheme .....	63
2.3.	The Linearized Equation .....	65
2.4.	Solution of the Linearized Equation .....	66
3.	Quasi-Periodic Solutions and Invariant Tori for Lagrangian Systems: Quantitative Analysis .....	69
3.1.	Spaces of Analytic Functions and Norms .....	69
3.2.	Analytic Tools .....	71
3.3.	Norm-Parameters .....	72
3.4.	Bounds on the Solution of the Linearized Equation .....	74
3.5.	Bounds on the New Error Term .....	76
4.	KAM Algorithm .....	79
4.1.	A Self-Contained Description of the KAM Algorithm .....	80
5.	A KAM Theorem .....	81
6.	Application of the KAM Algorithm to Problems with Parameters .....	87
6.1.	Convergent-Power-Series (Lindstedt-Poincaré-Moser Series) .....	87
6.2.	Improving the Lower Bound on the Radius of Convergence .....	88
7.	Power Series Expansions and Estimate of the Error Term .....	90
7.1.	Power Series Expansions .....	90
7.2.	Truncated Series as Initial Approximations and the Majorant Method .....	93
7.3.	Numerical Initial Approximations .....	96
8.	Computer Assisted Methods .....	96
8.1.	Representable Numbers and Intervals .....	96
8.2.	Intervals on VAXes .....	97
8.3.	Interval Operations .....	98
9.	Applications: Three-Dimensional Phase Space Systems .....	99
9.1.	A Forced Pendulum .....	99
9.2.	Spin-Orbit Coupling in Celestial Mechanics .....	101
10.	Applications: Symplectic Maps .....	104
10.1.	Formalism .....	104
10.2.	The Newton Scheme, the Linearized Equation, etc. ....	105
10.3.	Results .....	106
	Appendices .....	107
	References .....	127

**Ergodicity in Hamiltonian Systems***C. Liverani, M.P. Wojtkowski*

0.	Introduction .....	131
1.	A Model Problem .....	132
2.	The Sinai Method .....	137

**Table of Contents****IX**

3.	Proof of the Sinai Theorem .....	141
4.	Sectors in a Linear Symplectic Space .....	145
5.	The Space of Lagrangian Subspaces Contained in a Sector .....	149
6.	Unbounded Sequences of Linear Monotone Maps .....	153
7.	Properties of the System and the Formulation of the Results .....	160
8.	Construction of the Neighborhood and the Coordinate System .....	169
9.	Unstable Manifolds in the Neighborhood $\mathcal{U}$ .....	172
10.	Local Ergodicity in the Smooth Case .....	177
11.	Local Ergodicity in the Discontinuous Case .....	180
12.	Proof of Sinai Theorem .....	183
13.	'Tail Bound' .....	187
14.	Applications .....	191
	References .....	200

**Linearization of Random Dynamical Systems***Thomas Wanner*

1.	Introduction .....	203
2.	Random Difference Equations .....	208
2.1	Preliminaries .....	208
2.2	Quasiboundedness and Its Consequences .....	210
2.3	Random Invariant Fiber Bundles .....	221
2.4	Asymptotic Phases .....	227
2.5	Topological Decoupling .....	232
2.6	Topological Linearization .....	237
3.	Random Dynamical Systems .....	242
3.1	Preliminaries and Hypotheses .....	242
3.2	Random Invariant Manifolds .....	246
3.3	Asymptotic Phases .....	250
3.4	The Hartman-Grobman Theorems .....	253
4.	Local Results .....	257
4.1	The Discrete-Time Case .....	257
4.2	The Continuous-Time Case .....	260
5.	Appendix .....	266
	References .....	268
